

Title of module	VIII Stem Cell Lecture Series
Module coordinator	Prof. Dr. Beate Brand-Saberi

Credit points	5	Semester(s) in which the module is taught	1 and 2
Contact hours	3	Workload	150 hours

Lecturer(s)	Adamietz, Brand-Saberi, Bühler, Dehmelt, Dittmer, Eisenacher, Eysel, Faissner, Fuchs, Giebel, Herz, Heumann, Horn, B. Kaltschmidt, Klump, Koller, Wiese, Zähres
Type of teaching	Lecture (1 hours per week) in the first semester Lecture (2 hours per week) in the second semester Scientific lectures presenting original research work, Blackboard support of the presentations, further reading recommendations. Critical discussions concerning the presented research data. Blackboard support of the presentations, further reading recommendations. Skills for feedback of self-assessment of the learning progress; Developing a general awareness of stem cell related topics in society Making first contacts to PIs of international standing in their fields
Relation to curriculum	Compulsory; For master students of Biology/Biotechnology and Biochemistry of RUB also suitable as elective lecture.
Recommended prerequisites	No prerequisites from curriculum; Students taking this module will be expected to have a basic understanding of molecular biology, genetics, cell biology and cell physiology.
Aims	Students should develop an awareness of specific scientific questions related to stem cell biology and will be able to discuss them in context of current literature.
Learning outcome	Knowledge: Students have acquired an overview about views, problems and current research topics and know research fields and research groups related to stem cell biology Skills: Students are capable of understanding original research work and relate current research to basic knowledge Competencies: Students have learned to a) Relate current original research results to a theoretical background b) Follow-up recent achievements in the field c) Put relevant problems into a scientific context They are capable of communicating in a scientific context in front of an international audience.
Contents of module	Semester 1: - Neonatal stem cells in clinic and research () - Typical characteristics of CB-derived stem cells in comparison to embryonic stem cells (ESC) and induced pluripotent stem cells (iPS) () - Introduction to Biomedical Ethics () Ethical Issues in Stem Cell Research and Synthetic Biology () Research and Publication Ethics I ()

	<p>Research and Publication Ethics II () Gene Transfer to Hematopoietic Stem Cells () Self-renewal versus differentiation of hematopoietic stem cells (Giebel) Cellular Reprogramming I (Zähres) Cancer stem cells (Adamietz) Stem-like cells in cancer (Adamietz) Cellular Reprogramming II (Zähres)</p> <p>Semester 2: - Muscle Stem Cells and Myogenesis (Brand-Saberi) - Cancer stem cells (Thakus) - Embryonic and Induced Pluripotent Stem Cells for Research and Regenerative Medicine () - Use of stem cells in transgenic and knock out technologies Wiese 2 - Induction of pluripotent stem cells (Zähres) - Novel sources of adult human stem cells with multipotency (B. Kaltschmidt) - Intracellular signalling in stem cells (Heumann) - Neonatal stem cells in clinic and research () - Fat-derived human mesenchymal stem cells and dental follicle cells: Isolation, signalling and potency – comparison () - Molecular structure and functions of the stem cell niche (Faissner) - Limbal Stem Cells - from bedside back to bench (Brand-Saberi) - Advances in neonatal stem cells research and application () - Cell Biology of Neural Stem Cells during CNS Development N.N</p>
<p>Study and examination requirements; Forms of examination</p>	<p>Discussions during and after the lectures are required.</p> <p>The mode of examination on which the module mark is based will be a multiple choice test. The examination will be 90 minutes and the question paper will consist of 9 questions with five choices for each question.</p>
